

You have learned how erosion carries and deposits sediments. Wind, gravity, running water, and ice carry these sediments and deposit them into oceans and lakes.

Think about how these forces of erosion move and deposit rocks.

Now explain to the reader of your paper how erosion moves and deposits rocks.

Landforms are broken down by physical and chemical weathering.

Think about how mechanical weathering breaks down landforms.

Now explain to the reader of your paper how mechanical weathering breaks down landforms.

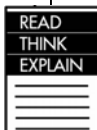

Science IDEAS Writing Prompt: Earth Processes, Tab 3, Narrative

One day you visit the beach and build a sandcastle. When you return the next day, you find that the sandcastle has been destroyed.

Think about what could have happened to your sandcastle while you were away.

Now tell a story about what happened to your sandcastle while you were away.

You turn into a mountain.

Think about how you would be broken down by weathering.

Now tell a story about how you are broken down by weathering.
