	Magma cools to become igneous rock.
N =	Think about how magma is changed into igneous rock.
	Now explain to the reader of your paper how igneous rock is changed into sedimentary rock.

	Sediments of lime, mud, and sand undergo changes to become metamorphic rock.
	Think about how these sediments are changed into metamorphic rock.
	Now explain to the reader of your paper how sedimentary rock is changed into metamorphic rock.

READ THINK EXPLAIN	_	You are a blob of magma in the mantle. Convection pushes you up into the crust. You cool and become igneous rock.
		Think about what you would experience as you move through the rock cycle.
		Now tell a story about your journey as a rock moving through the rock cycle.
1		

READ THINK EXPLAIN	You are a beautiful diamond. Think about the processes that occurred to form you. Now tell the story of how you were formed.
